

Amanda Hsu

Technical Game Designer

(440) 431 -7016
amandahsu0613@gmail.com
Cleveland, OH

Portfolio: <https://dada0613.github.io/portfolio/#game-design>

Technical Game Designer with a dual background in Computer Science and Theater Arts. Experienced in prototyping gameplay mechanics, implementing game systems, and scripting interactive environments. Passionate about creating immersive, narrative-driven experiences and turning design concepts into playable content using scalable C# frameworks.
Work Authorization: Eligible for Canada IEC Work Permit (Young Professionals). No LMIA sponsorship required.

SKILLS & ABILITIES

Core Skills

- Systems Design, Combat Balancing, Level Design, Puzzle Design
- UX Flows, Interaction Design, Prototyping
- Narrative Structure, Environmental Storytelling

Technical

- Languages: C#, Java, Python, HTML/CSS
- Engines & Development: Unity (Prototyping & Scripting), Git/GitHub, Visual Studio Code
- Design & Multimedia: Adobe Creative Suite (Photoshop, Illustrator, InDesign, Premiere Pro), VectorWorks (Spatial Design), Reaper (Audio)
- Language: Mandarin (Fluent), English (Fluent)

EDUCATION

2023 - 2027

Case Western Reserve University
CSDS Department GPA: 4.0

Bachelor of Arts (Double Major)

Gaming Minor

Computer Science Major

Theater Arts Major

Concentration in Technical Theater Design

Fall 2024 - Study Abroad (Ireland)

Trinity College Dublin

Practical Game Design Experience

Bedlam - 3D Horror Hospital Escape

Fall 2025

- Developed a modular C# Interaction System using Interfaces, decoupling gameplay logic from art assets to allow designers to rapidly implement interactive props (doors, switches, collectibles) without code dependency.
- Engineered a custom Event Management System to synchronize lighting, audio, and visual triggers, enabling precise, frame-perfect execution of horror sequences.
- Collaborated with Level Designers to optimize scene performance, implementing occlusion culling strategies and efficient lighting logic for a 14-person team project.

Claw Patrol - 2D Tower Defending (Cat & Crochet-Themed)

Spring 2024

- Scripted 4 distinct enemy AI behaviors and movement patterns in C#, designing unique mechanics that forced players to adapt tactical positioning.
- Iterated on enemy AI difficulty based on weekly playtest feedback.
- Engineered the gameplay UI architecture, programmatically linking visual assets to backend resource managers to provide real-time feedback.

Jade & CO. - A Strange Cave Escape (Text Adventure)

Spring 2024

- Designed complex branching narrative logic, managing state variables to track player choices and trigger puzzle consequences.
- Structured the non-linear game progression map, optimizing the information flow to ensure intuitive navigation through the text-based interface.

ADDITIONAL TECHNICAL PROJECTS

Time Capsule - Interactive Web Interface (UI/UX)

Spring 2025

- Developed a dynamic front-end interface, implementing responsive UI feedback loops and interactive message systems that parallel game UI logic.

Mexican Train Domino Game (Java Multiplayer)

Fall 2023

- Architected a decoupled MVC system in Java, separating core game logic from the GUI to facilitate modular testing.
- Implemented complex validation algorithms to handle turn-based state management and legal move generation, ensuring 100% logic stability.

WORK EXPERIENCE

Spring 2026

Case Western Reserve University

Teaching Assistant - Data Structure

- Selected to mentor students on core algorithms (Graphs, Trees) and debug complex Java/C++ codebases.

2024 - Now

Theater Department

Scene Shop Technician

- Built scenery using spatial design and visual composition principles
- Collaborated with designers and directors in fast-paced productions

2026 - Now

Sears Think[Box]

Prototyping Technician

- Assist users with 3D printers, laser cutters, and electronics
- Maintain equipment, inventory, and safety procedures
